DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Group I, claims 1-18 in the reply filed on 07/01/05 is acknowledged.
2. Claims 19-29 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on 07/01/05.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims onethrough are rejected under 35 U.S.C. 102(e) as being anticipated by Ngo et al. (US 2004/0147117 A1).

In re claim 1, Ngo (esp. Fig. 4) discloses a semiconductor device structure, comprising atop an FEOL (topside active region) semiconductor substrate:

Art Unit: 2815

a copper via level (10) in electrical communication with the substrate and comprising also a solid permanent low-K dielectric material (11) which is non-heat decomposable at processing temperature range;

a sacrificial material (13), which is subject to decomposition and removal under process heating, in the line level atop the solid permanent low-K dielectric material;

a gas permeable hard mask (14) atop the sacrificial material;

a copper wiring (lower part of 42) having a top surface at the hard mask level and being in electrical communication with the via level; and

a thin protective cap (43) on the top surface of the copper wiring.

Ngo does not expressly disclose the substrate being FEOL (front-end-the-line).

In re claim 9, Ngo discloses the device of claim 1, further comprising a gas impermeable etch stop layer (12) between the via level and the line level.

In re claim 16, Ngo discloses the device of claim 1, wherein the sacrificial material which is subject to decomposition and removal under process heating is selected from the group consisting of polypropylene glycols (section [0024]).

Allowable Subject Matter

5. Claims 2-8, 10-15, 17 and 18 allowed.

6. The following is a statement of reasons for the indication of allowable subject matter:

a. The semiconductor structure comprising at least a permanent air dielectric material atop the etch stop is neither anticipated nor obvious over the prior art of record.
